

4 DIGIT WALL MOUNTED KEY STORAGE BOX

Stock Code: T1688

Features:

Instructions:

Fitting the key storage box:

Tools required (not supplied): Hammer drill, masonry drill bit, PH#2 screwdriver
The key storage box should be fitted to the wall using the screws supplied (discrete location recommended).

Before wall mounting the storage box always check that the personal code you have set does correctly open the wall box (before placing your keys inside!).

- Mark holes on the wall using the holes in the rear of the storage box as a template
- Drill the holes using the hammer drill and masonry drill bit
- Insert wall plugs into the holes
- Fit the key safe to the wall using the screws supplied

Opening the key storage box for the first time and setting the combination:

Note: The factory preset combination is 0-0-0-0

- Turn the dials to the preset combination 0-0-0-0 and open the key storage box by pressing the opening button downwards.
- The reset lever is located inside the key storage box. Slide the reset lever to the upper right position (see Fig 2 below).

lock position

Fig 2.

lever in code
change position

- Turn the dials to your desired combination.
- Slide the reset button back to the lower left 'lock' position (see Fig 1).

The key storage box can now only be opened with your personal combination. Make a note of it as once you have changed the factory default code we are unable to assist you in opening the box. The combination can be changed at any time by following the procedure above.

Please keep these instructions for future reference.
